Cristian Steve David Machado

DevOps Engineer JR (AWS, DO, GITLAB CICD, DOCKER,
VAGRANT, JAVA SPRINGBOOT)
Colombia

Extracto

Hi, I'm Cristian, a Colombian engineer looking to become part of an awesome team, applying the knowledge that I currently have.

I have good Knowledge of AWS services due to my experience as AWS CSA in Amazon, the CI/CD pipeline lifecycle, and all the tools used to implement a DevOps strategy in a software development environment.

Some of the tools that I have experience with are Docker, Ansible, Vagrant, Terraform, Git, VirtualBox, Springboot, Maven, CloudFront.

My go to for CI/CD is GITLAB, however I have experience with GITHUB Actions.

My preferred OS is Linux, I do have good knowledge in Command-Line and bash scripting

Currently, my interest is to continue learning about the full process of designing, coding, and implementing effective software solutions in several languages applying good practices both in technical and human design fields.

Programming languages that I have experience with:
Java, JavaScript, Python.

Knowledge of Oop, design patterns, cybersecurity, always tech-driven.

My spoken English level is C2, I'm excellent at teamwork and love to develop under Agile methodologies.

If I look like a good fit for your team, don't hesitate about contacting me.

Experiencia

Autónomo

DevOps Engineer

junio de 2022 - Present (5 meses)

Freelance jobs for small an size marketplaces, helping them implement DevOps strategies in their workflow and optimize AWS costs.
