David Dominguez

💼 Employment History

Lead Fullstack Developer - at 360PMI
June 2021 — Present

Architecture definition, SaaS development from start to finish, TDD, QA implementation, microservices, hybrid cloud deployments, and hiring.

Specialist of Web and Mobile development - at Credibanco
February 2020 — Present

Back-end services (SpringBoot, Maven, SSO, OAuth2, containers) and front-end apps (Android, React, HTML), encryption, static code analysis (SonarQube), unit testing (JUnit, Cucumber), pipelines (Jenkins) and DevOps.

Fullstack Developer - at Emilia
October 2018 — February 2020

Platform with a web client for admins (React), a client for users (React, Android, Java), and a back-end (Java, Python).

Developer - Freelance
March 2018 — Present

📊 Projects

Jarvis
January 2019 — Present

UI based on voice commands. Like Siri. Jarvis was written using React, Python and NodeJS. Currently I'm adding him some AI (NLP) and a React Native app.

SoftReader
August 2018 — November 2018

App that allows the user to upload a PDF, in order to show it and then read it out loud. It uses text-to-speech. All his functionality are client-side based (Android, Java).

Extras

These range from an educative platform (Android, Java) to an implementation of Google's PageRank (SpringBoot)... for determining the employability of people!

🎓 Education

Computer Science and Systems Engineering, Universidad de los Andes, Bogotá
January 2018 — Present
